                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Gaps
                                                                                                                                                                                                                                                   arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                NOTE: This is a 'working draft' sequence. It currently consists of 11 contigs. The true order of the pieces is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The WGS reads were placed uniquely on the MGSCv3 CS7BL/6J assembly and SNP detection was carried out by SSAHA-SNP. 225,000 reads were annotated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         as STSs and 81,000 SNPs were annotated with alleles from C57BL/6J and the strain from which the particular read came. The validation rate for these SNPs was estimated at approximately 98%.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

/note="Organ: Stomach; Vector: pTz18RP1; Site_1: EcoRI;
Site_2: Not1; The poly (A) + RNA was dephosphorylated with
bacterial alkaline phosphatase (BAP) and then decapped
with tabacco acid pyrophosphatase (TAP). The decapped
intact mRNA was ligated with DNA-RNA linker including EcoR
iste by treatment of T4 RNA ligase and the first strand
cDNA was synthesized from oligo dT-selected mRNA by
priming with dT-tailed vector. The cDNA vector was
adjusted to have about 60nt. The cDNA vector was
circularized with E. coll DNA ligase after digestion of
EcoRI which site is also included in vector. An RNA strand
converted to a DNA strand by Okayama-Berg method. The
competent cells E. coll ToplOF' by electroporation method.
The cDNA libraries constructed by this method are
full-length enriched cDNA library."

1st strand cDNA was primed with a NotI-loigo(dT) primer. Five prime
end enriched, double-strand cDNA was digested with Not I and cloned
into the Not I and EcoRV sites of the pCMVSPORT 6 vector. Library
was not normalized. Library was constructed by Life Technologies, a

/containing the following tissue(s): Chondrosarcoma cell

line CSS: The library was constructed according to

Bonaldo, Lennon and Soares, Genome Research, 6:791-806,

Bonaldo, Lennon and Soares, Genome Research, 6:791-806,

Bonaldo, Lennon and Soares, Genome Research, 6:791-806,

logor Trime CSS: The library was primed with Not

oligo-dT prime containing a Not I site. Double stranded

cDNA was ligated to an ECOR I adaptor, digested with Not

oligo-dloned directionally into pT73-Pac vector. The

oligomucleotide used to prime the synthesis of

first-strand cDNA contains a library tag sequence that is

located between the Not I site and the (dT)18 tail. The

sequence tag for this library is GCTCAAGGCT.

Homo sapiens (human)

SM Homo sapiens

Eukaryota; Metazoa; Chordata; Craniata; Vertebrata; Euteleostomi;

Bukaryota; Metazoa; Chordata; Catarrhini; Hominidae; Homo.

Mammalia; Eutheria; Primates; Catarrhini; Hominidae; Homo.

1 (bases 1 to 711)

Brandenberger,R., Wei,H., Zhang,S., Lei,S., Murage,J., Fisk,G.J.,

Li,Y., Xu,C., Fang,R., Guegler,R., Rao,M.S., Mandalam,R.,

Lebkowski,J and Stanton,L.W.

Transcriptome characterization elucidates signaling networks that

control human ES cell growth and differentiation

Nat. Blotechnol. 22 (6), 707-716 (2004)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 | S54 | Caracian | Car
                                                                                                                                                                                                                                                                                                     Tingolstaedter Landstr.1, D-85764 Neuherberg, Germany
This is the 5' sequence of the clone insert
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKFZ); Email s.wiemann@dkfz- heidelberg.de;
sequenced by DKFZ (German Cancer Research Center,
Heidelberg/Germany) within the cDNA sequencing consortium of the
German Genome Project.
This clone (DKFZDSEKOLI18) is available at the RZPD in Berlin.

//note="Correction" in the part of the confidence of the confidence of the corrected from primary human pericytes in culture. A directionally cloned primary human pericytes in culture. A directionally cloned cDNA library in the pSPORTI vector (Invitrogen) was constructed at Bioserve Biotechnology (Laurel MD) essentially following the protocols of the SuperScript plasmid System full details of which are contained in the manufacturer's Instruction manual (http://www.lifetech.com/). First strand synthesis was carried out using a Not I primer-adapter [5-pacTrandArdCGCAGCCCC(C(T)]5-3']. CDNA was [5-pacTrandArdCGCAGCGCCCC(T)]5-3']. CDNA was cloned in Not I/Sal I sites. EST analysis was performed at the NIH Intramural Sequencing Center (NISC)."
